

V1 — exact Hamiltonian bridge and numerical clock consistency

$(r, a_2, \varepsilon) = (0.08, 0, 1)$; no theorem-box validation

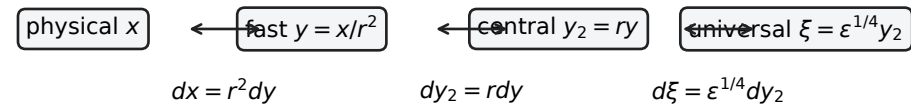

(a) Hamiltonian / reverser identities

EXACT/DERIVED

identity	exact residual
central energy reversibility	0
central hamiltonian contraction	0
central reverser primitive	0
central reverser vector field	0
physical first integral	0
physical hamiltonian contraction	0
physical reverser primitive	0
physical reverser two form	0
physical reverser vector field	0

(b) exact coordinate / clock crosswalk

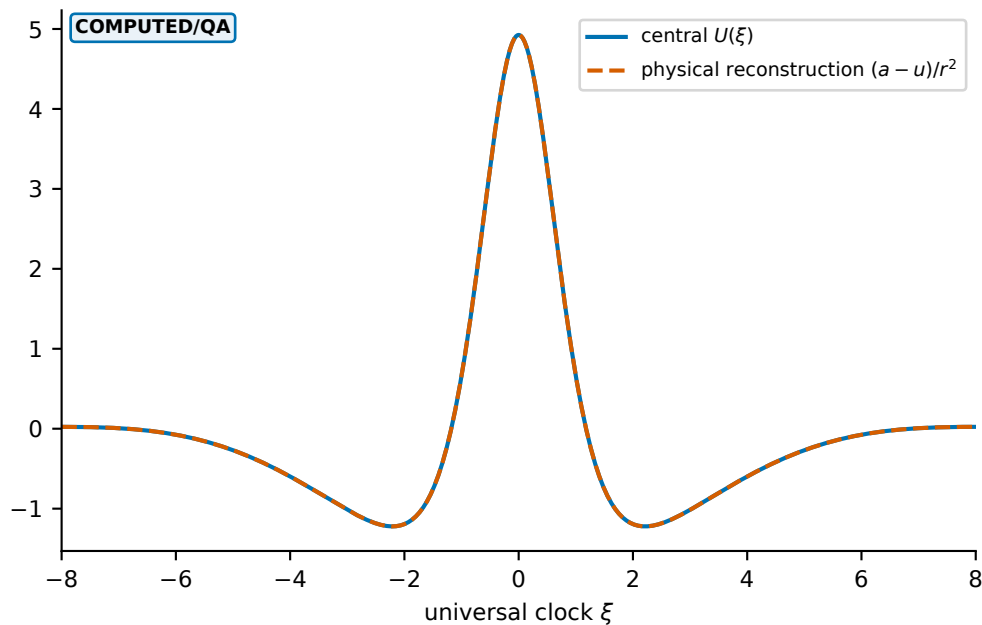

EXACT/DERIVED

$$\lambda_\delta = \varepsilon^{9/4} r^5 (P dU - Q dV); \text{ action is a state-space integral}$$

(c) same finite orbit in two formulations

COMPUTED/QA

(d) independent physical/central refinement

COMPUTED/QA
